

Mr. Theodore Anthony "The Nuge" Nugent,

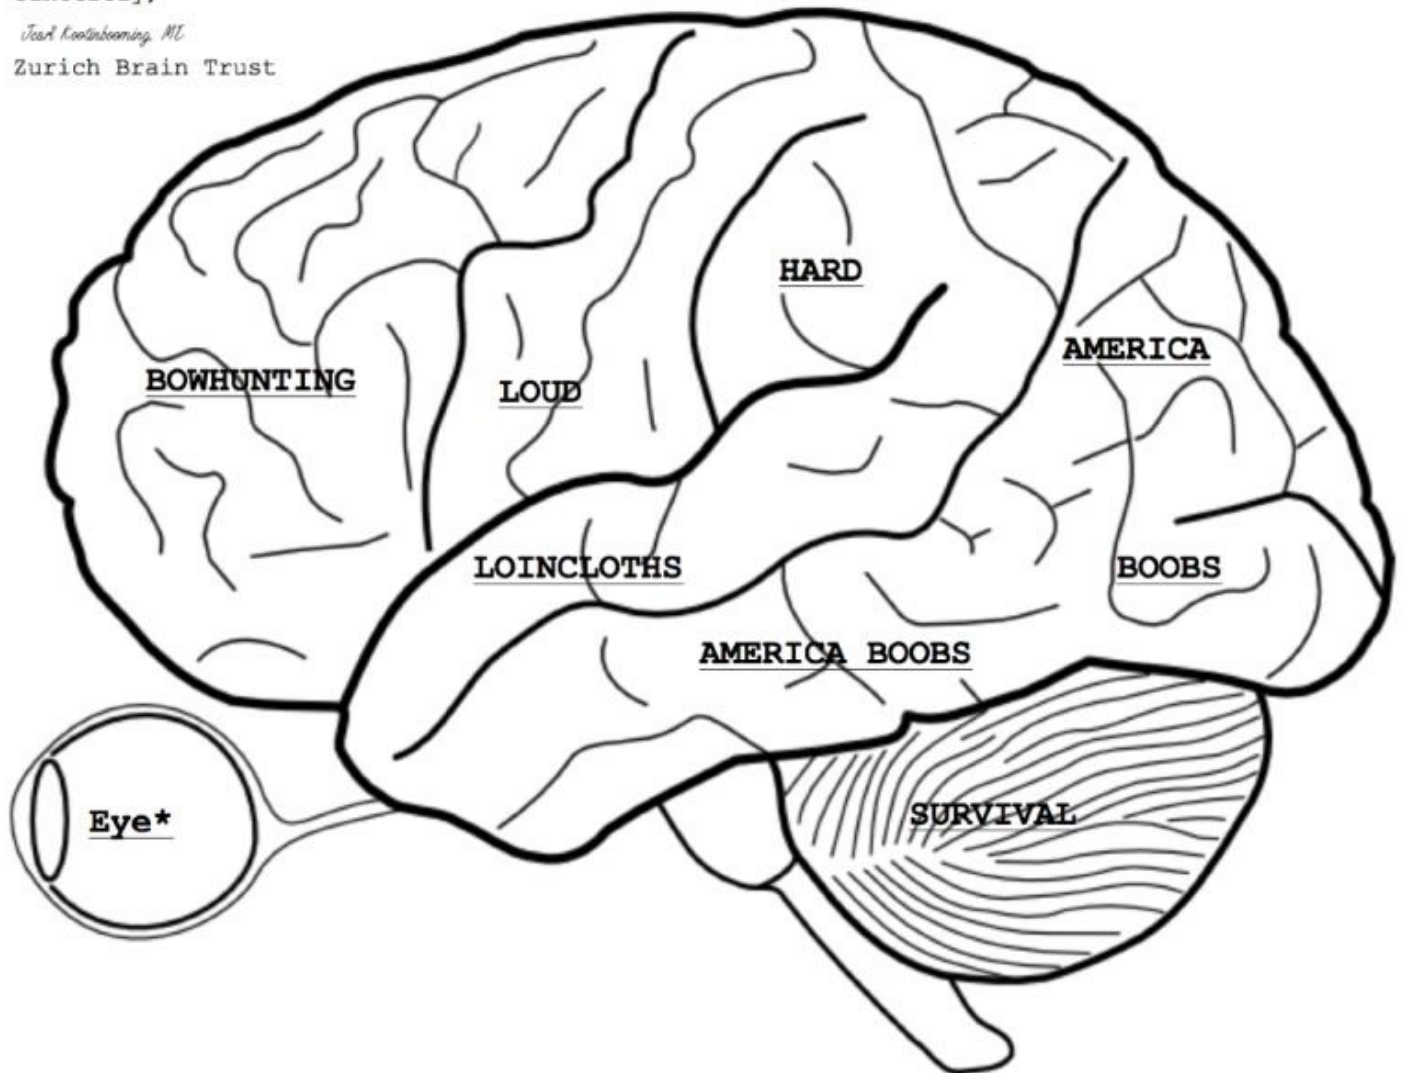

As you requested, we have analyzed the tests taken during your visit with our hospital. What we have found is, to say the least, quite abnormal. I regret to inform you that we will be unable to save your brain in order to create an "annihilating fucking zombie predator".

Below, we have provided you with a very basic diagram of the human brain, complete with labels indicating what, in your brain, they are capable of recognizing and processing.

Again, we apologize for being unable to turn you into the living dead, and congratulate you on your continued ability to function on any level.

Sincerely,

Josh Koolinbooming, MD
Zurich Brain Trust

*Please Note: Given your brain/site related activity, it appears that your vision only recognizes living creatures stricken with fear, namely woodland creatures and women.
